Xpanda/Quantum uniquely designed tubular steel lattice pattern, retractable security gates have been widely accepted across the USA, Mexico and Canada by many high-profile brick and mortar corporate retailers for over 20 years. To uphold the integrity of our maintenance-free, fold-away security gates, our professional installers across North America are in place and well-trained to assure complete customer satisfaction.

Many Loss Prevention leaders across the country believe when it comes to “Smash and Grab deterrence”, a visual and strong physical protection is still one of the most critical aspects of **AFTER-HOURS** security for storefront protection.

Why do you need retractable security gates?

- Security gates provide the visual layer of defense against “smash and grab break ins.”
- Their bold, highly visible appearance makes them a deterrent when your store is closed.
- They easily fold and roll away virtually out of sight during business hours.
- They are cost effective and easy to operate, maintenance free and esthetically pleasing.
- 2-year warranty.

Why Choose Us?

Xpanda/Quantum security products are the best security gates, manufactured using unique tubular steel, very strong and visually appealing. They are visual deterrents at night when you need the protection, while continuing to provide a welcome appearance to customers. All of our gates and folding window grills come in a hard shell, high-gloss baked epoxy coating that is made to last. Our products are easy-to-use and can be neatly folded away to 15% of their opening size.

Many experts agree that a **layered** approach is the way to go for storefront security. While security film provides some protection(if installed correctly), it is not a **VISIBLE** barrier. The opportunistic criminal may or may not be successful in the break-in attempt but replacing the damaged windows as well as new film can prove to be very costly indeed. Roll down shutters, on the other hand , have the visual effect, but in many cases the shutters are installed outside of the storefront and may not conform to fire and compliance laws. Additionally, cost effectiveness and persistent maintenance issues for existing retail stores is challenging.

A senior LP executive at a recent trade show commented on the great results his company has achieved with Xpanda/ Quantum retractable fold – away gates.

“ The visual and bold after hours strategy deters ninety nine percent of the opportunistic good crooks from any attempt, they simply move on to a target that presents no perception of visual security.....The remaining one percent of the bad criminals.....they will manage and find a way to break-in: whatever obstacle is at hand”

Access Control Using Security Gates Attached to Mobile or Portable Trolley System

Mobile/Portable trolley gates are retractable gates mounted on to our unique quick connect trolleys. They can be easily positioned and moved around within the property to serve as a physical and visual barrier. People will instantly see & understand that a given area is off limits and out of bounds.

Our unique system is used at:

- Retail Stores
- Sporting Arenas
- Grocery Stores
- Convention Centers
- Trade Shows
- Shopping Malls
- Airports
- Pharmacies
- Schools

Can very large areas be sectioned off with portable trolleys?

Yes, very large sections have been used for access control at sporting arenas and airports. There is no restriction to length or configuration.

The fact that our gates are made from tubular steel makes them strong & lightweight and easy to maneuver and store when not in use. They can be reconfigured at a moment's notice to anywhere in your facility.

Our mobile trolleys are being used in after hours situations to block off pharmacy areas, retail aisles and kiosks from the public.

Access Control Assists with Reducing Shrinkage

Securely locking up items and controlling access to the merchandise can help control shrinkage. Xpanda/Quantum Security works with retailers to help with their unique security – access control challenges and applications. Using fold-away security allows full access to the merchandise when required, and easily expands and locks when security is needed.

The strength and adaptability of our security gates allow us to design and configure applications, layouts and mounting solutions to virtually any situation.

Speak with one of our specialists to discuss your unique challenge.

Schools - Colleges and Universities

Access control gates work well in hallways during events that are open to the public. Many schools hold presentations, concerts and other events in their auditoriums or gyms. While the general public is given access to the school during these events, it is not advisable to provide complete access to the entire building. Access control gates clearly demonstrate which areas are off limits and keep unauthorized individuals out.

Many institutions offer space for kiosk vendors. Portable security gates are easily maneuvered into place when security is needed and fold neatly out of the way, to roll away, when not in use.

Why use retractable security gates in my manufacturing/warehouse facility?

There are many risks of theft and injury. Securing your shipping doors while ventilating with the doors open provides you with peace of mind that no unnoticed/unwanted people enter your facility.

Our unique tubular steel gates are powder coated white, grey, black and safety yellow and are used for:

- Bay & Dock door entries
- Inventory racking to secure valuable merchandise
- Portable sections to restrict access and/or quarantine areas with sensitive goods
- Safety barriers around moving machinery

What are the benefits of using retractable security gates in your facility?

- Cost effective solutions to safety and security
- Durability, reliability, safety and security
- Portable – mobile and ease of use
- Security gates for bay doors allow for ventilation and preventing unwanted intruders
- Highly visible safety yellow for high risk areas
- Helps prevent accidental fall from elevated loading docks

Man Door Security

Xpanda heavy duty double diamond security gates are available with keyless egress using either a thumb turn or **ADA lever lock**. Double bi parting or single gates allow for security at night and worry free ventilation during the day.

Shipping Door Security

Peace of mind protection, 79" to 98" high, no restriction widths. Available in white, grey, black and safety yellow.

Variety of Lock Options

Window gates are secured with our unique keyed alike **SLAM** locks (no loose pad locks). Door gates use our fully extruded lock post with hook latch, lock options are basic mortise cylinders, interchangeable housing for 7pin cores, thumb turn or ADA lever lock.

207 Lock Post for Bi Parting Doors

Upper and lower rods built in for additional locking points.
